

如何锁FP

A12 及以前 (A11 A10等)

build\make\core\version_defaults.mk

```
277
278 DATE := date -d @$ (BUILD_DATETIME)
279 .KATI_READONLY := DATE
280
281 # Everything should be using BUILD_DATETIME_FROM_FILE instead.
282 # BUILD_DATETIME and DATE can be removed once BUILD_NUMBER moves
283 # to soong_ui.
284 $(KATI_obsolete_var BUILD_DATETIME,Use BUILD_DATETIME_FROM_FILE)
285
286 HAS_BUILD_NUMBER := true
287 BUILD_NUMBER := $(shell date +%Y%m%d) 20240705
288 ifndef BUILD_NUMBER
289 # BUILD_NUMBER should be set to the source control value that
290 # represents the current state of the source code. E.g., a
291 # perforce changelist number or a git hash. Can be an arbitrary string
292 # (to allow for source control that uses something other than numbers),
293 # but must be a single word and a valid file name.
294 #
295 # If no BUILD_NUMBER is set, create a useful "I am an engineering build
296 # from this date/time" value. Make it start with a non-digit so that
297 # anyone trying to parse it as an integer will probably get "0".
298 BUILD_NUMBER := $(shell date +%Y%m%d) 20240705
299 HAS_BUILD_NUMBER := true
300 endif
301 .KATI_READONLY := BUILD_NUMBER HAS_BUILD_NUMBER
302
303 ifndef PLATFORM_MIN_SUPPORTED_TARGET_SDK_VERSION
304 # Used to set minimum supported target sdk version. Apps targeting sdk
305 # version lower than the set value will result in a warning being shown
306 # when any activity from the app is started.
307 PLATFORM_MIN_SUPPORTED_TARGET_SDK_VERSION := 23
308 endif
309 .KATI_READONLY := PLATFORM_MIN_SUPPORTED_TARGET_SDK_VERSION
310
```

A13 和 A14

build\make\core\version_util.mk

```
\\192.168.5.173\android173\work\work2\yml\14.0\yml\A14\build\make\core\version_util.mk - Notepad++

267 # Used to set minimum supported target sdk version. Apps targeting sdk
268 # version lower than the set value will result in a warning being shown
```

注：修改的地方都是一样的，区别在于A12和A13的文件不一样

FP的意义

获取软件中的FP：

```
adb shell getprop | findstr ro.system.build.fingerprint
```

```
ro.system.build.fingerprint=OUKITEL/C50_EEA/C50:14/UP1A.231005.007/20240628:user/release-keys
```

是用于区分软件的ID，是用于 SMR认证软件，IR认证软件 区分软件的一个属性

SMR软件的 base_os值 就是IR软件的 FP

```
ro.build.version.base_os=OUKITEL/C50_EEA/C50:14/UP1A.231005.007/20240419:user/release-keys
```

GMS 包日期：

```
[ro.com.google.gmsversion]: 14_202401
```

安全补丁日期

```
[ro.build.version.security_patch]: 2024-05-05
```
